FIG 3

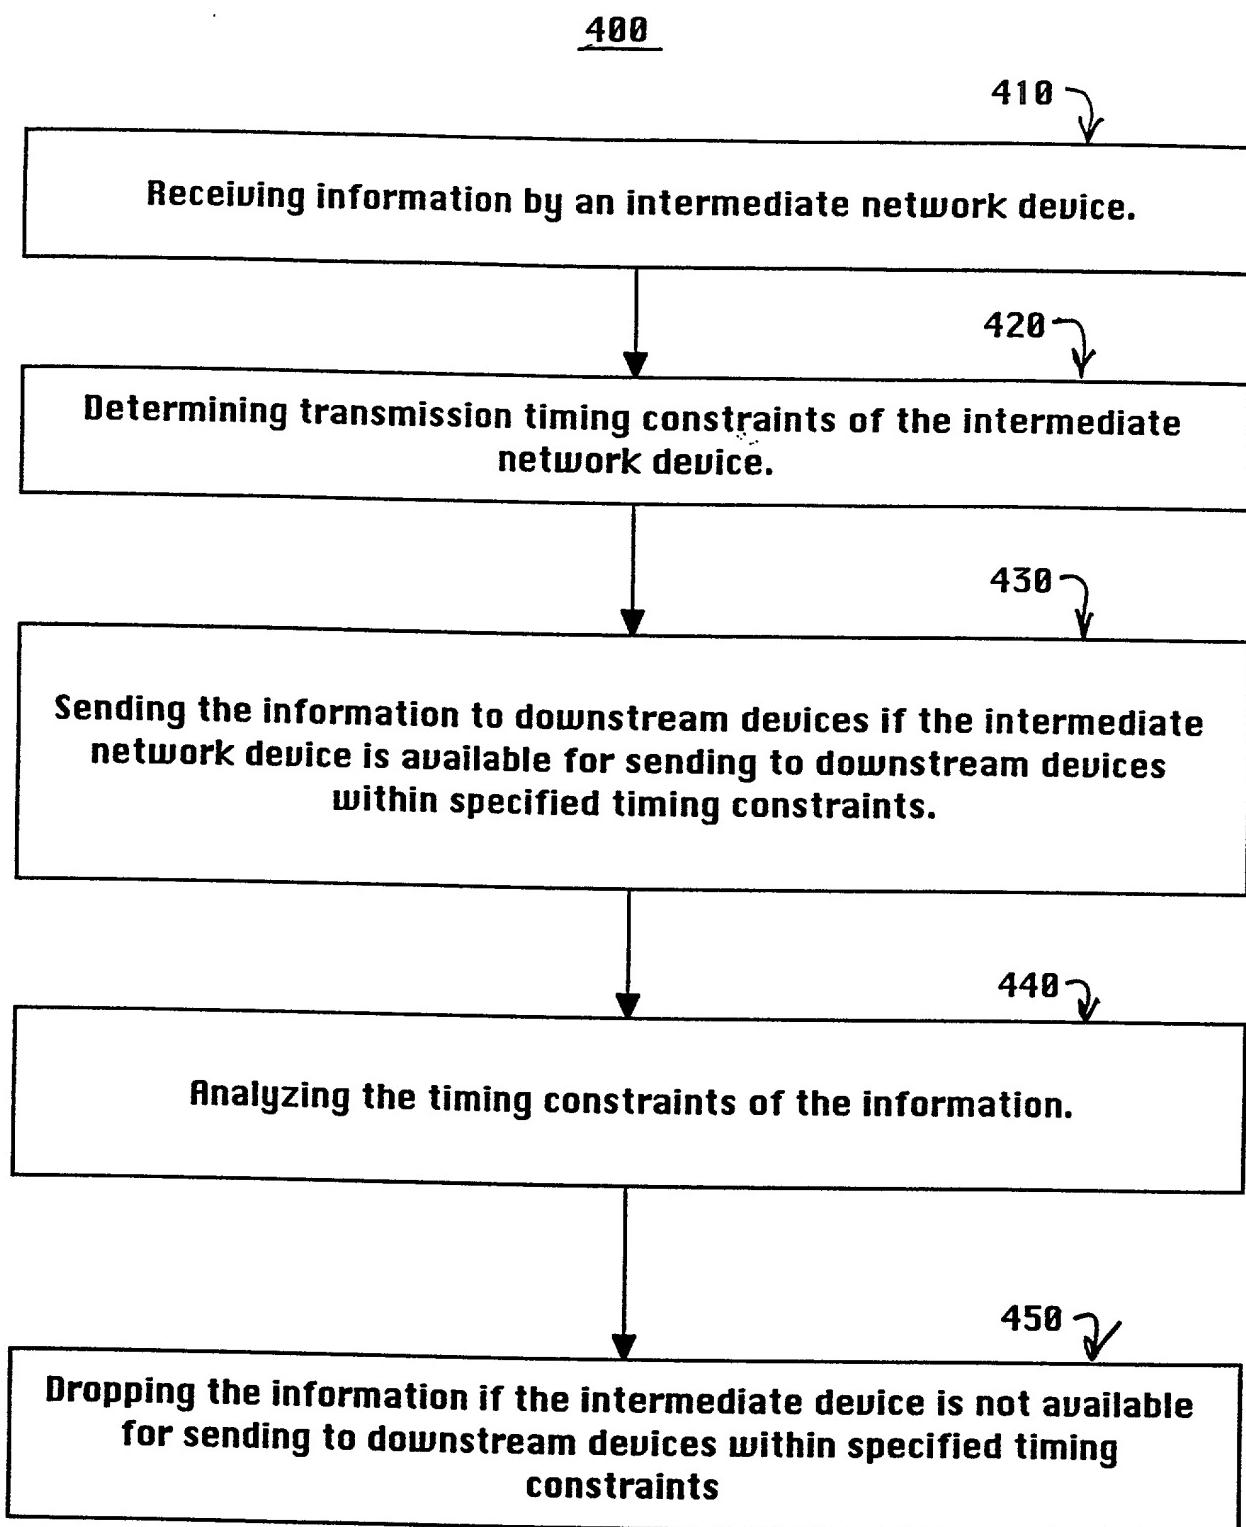

FIG 4A

470

471

Receiving time sensitive information by an intermediated network device.

472

Determining if an intermediated network device has communicated information along a first communication path that is included in a second communication path for time sensitive information for a final destination.

473

Communicating the information along the first communicatin path.

FIG 4B

490

491 ↘

Establishing a time sensitive pre-emption communication link.

492 ↘

Cut-through routing time critical information on a virtual channel.

FIG 4C

500

510 ↘
↓

Selecting a first communication link in a first communication path.

520 ↘
↓

Analyzing if the first communication link in unavailable.

530 ↘
↓

Forwarding time sensitive information on an available communication link.

FIG 5
